Trans. of Lakokrasochnyye Materialy i Ikh Primeneniye (USSR) 1960, no. 1, pp. 75-78.

A regular fluctuation of the electric conductivity of the reacting mass in the process of alcoholysis of vegetable oils by polyatomic alcohols is established. A method of controlling the alcoholysis process and of determining the moment of the attainment of equilibrium by the fluctuation of the resistance is developed. An apparatus is described for continuous automatic control and recording of the fluctuation of the resistance in the alcoholysis process. The use of the new method of control of the process of alcoholysis of vegetable oils by polyatomic alcohols makes it possible (1) to determine the optimum moment of stopping the process; (2) to shorten the time (Engineering--Chemical, TT, v. 5, no. 10) (over)
